

Working Electrode Holder-clip type

KWEH02B

Working Electrode Holder-clip type

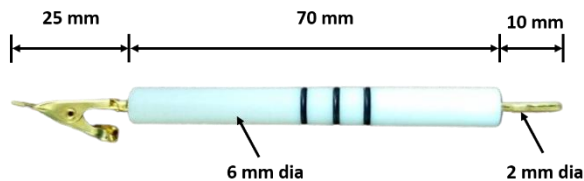

Working electrode holder is used to hold the electrode sample where electrochemical studies need to be done.

Technical Specifications

Length	105mm
Holder dia	6mm
Max Sample thickness	2mm
Clip material	Gold coated Copper clip
Connecting rod	Gold coated Copper (2mm)

Electrode dimensions

Applications

It holds mostly sheet or thin plate type electrodes materials. These holders are gold coated with highly conducting contacts. Ideal for holding samples in Gas tight environments.

- It holds samples up to 2mm thick.
- It is made up of Gold-coated copper and chemically stable PTFE.
- The sample fittings are easily attached via clip.
- PTFE body ensures durability in reactive environments.
- Designed for use with electrochemical cells featuring Teflon tops.

Maintenance and Handling

➤ Chemical Properties:

- Resistant to common aqueous electrolytes
- Chemically inert under electrochemical operating conditions

Advantages

- Easy electrode replacement
- Stable and reproducible electrical contact
- Leak-proof and durable design
- Suitable for routine and research applications

Optional Parts:

KEC10A
Banana Cable Set

KEC10B
Banana Connector Pin

KA01 (Red), KA02 (Black)
Alligator Clip
